## Requirements

Create a React web app that lists headlines from NewsApi. The app needs to have the following features:

- Display a list of headlines from the headlines api (https://newsapi.org/docs/endpoints/top-headlines). You can set any country or source that you like.
- Each headline item should display the following: title, source, author, date, description, thumbnail image
- Detail screen: when a user clicks on a headline they should be able to view the news article in another screen.
- Infinite scrolling on the headline list will be a plus, but not mandatory.
- Sort order: latest headline first
- Should be mobile optimized

API Doc: https://newsapi.org/docs (a free api key can be created by signing up)

Suggested UI Design of the Card

*This is just a suggestion and the overall design is up to you.

Test Evaluation Criteria

- Project and code structure
- Coding style and code standards
- Overall look and feel
- User experience
